Creating Intelligent Synergy Between Business and IT

**OUTSOURCE DEVELOPMENT,
MANAGEMENT AND
MAINTENANCE OF YOUR
IT INFRASTRUCTURE**

Outsource Development, Management and Maintenance of Your IT Infrastructure

As your virtual IT department, we partner with you to create a custom IT solution tailored to the unique needs of your organization.

Creating, deploying, and managing an efficient and secure information technology (IT) infrastructure requires an in-depth knowledge of hardware, software, and network security, as well as dedicated resources who can monitor and maintain the end-to-end health of the infrastructure on an ongoing basis. For organizations with small IT departments or no IT department at all, this can be challenging and expensive.

IntelliSyn eliminates the challenge and reduces the expense by enabling you to off-load the development, management, and maintenance of your IT infrastructure and your network security. With IntelliSyn you get a fully staffed IT department and all the IT services you need at a fraction of the cost.

Design IT for the Way You Work

IntelliSyn's experienced team of experts understands the IT requirements created by the business environment in which small, medium, and large organizations operate. As your virtual IT department we partner with you to create a custom IT solution tailored to the unique needs of your organization. We assess the potential a technology has to have a real impact on your business before we recommend it. And we validate the effectiveness of the managed services, hardware, software, network security systems and solutions we recommend by using them as the foundation of our own business operations.

By off-loading your IT infrastructure challenges to IntelliSyn, you can easily harness the full power of the most advanced IT systems and solutions, and improve time-to-service with a custom infrastructure that works the way you work.

*Our managed services
are designed to help
you get the most
from your investment
in information
technology by
reducing downtime
that can negatively
impact business
productivity.*

Create Synergy Between Your IT and Your Business

IntelliSyn's complete portfolio of managed services is built with the industry's most advanced and best-of-breed hardware and software. Our services and solutions are designed to create better synergy between your IT and your business so that you can focus on the needs of your customers rather than on managing your IT infrastructure. Our managed services are designed to help you get the most from your investment in information technology by reducing downtime that can negatively impact business productivity. They maintain the flow of critical business information, and enhance business processes, productivity, and performance.

Customize IT Infrastructure Management with IntelliSupport

The highest costs you face with your business IT infrastructure are associated with the lost time and productivity created when your IT infrastructure is not working to maximum efficiency. These hidden costs can cripple your business and reduce your competitiveness. Our IntelliSupport service provides

customized, end-to-end infrastructure management, from network consulting to complete help desk technical support for desktop systems and network devices, such as servers, routers, switches, and wireless access points.

With IntelliSupport you get end-to-end service and support for every element in your network, 24 hours a day, seven days a week, 365 days a year. And if something goes wrong, you have only one number to call for immediate access to our team of experts.

Optimize Network Security with IntelliSecure

Ensuring your network is always operating at top efficiency is only part of the IT puzzle. You must also make sure your organization's most valuable asset

*With IntelliServer,
the daily hassles
associated with
using and managing
advanced IT are
eliminated so you
can get on with
your business.*

— the information and data on your network — is always protected from the legions of cyber criminals bent on infiltrating and corrupting business systems.

Our IntelliSecure service provides tailored, scalable, turnkey, managed security services 24 hours a day, seven days a week. It protects an organization's network and data with firewalls, content filtering, anti-virus, anti-spam, anti-spyware, data management, and intrusion prevention systems.

IntelliSecure ensures your network is always protected from the prying eyes and malicious intent of cyber criminals, from the competition, and even from disgruntled ex-employees.

Simplify Data and Application Management with IntelliServer

Of course all that information and the applications that use it must be stored somewhere. And they must be easily accessible by employees, partners,

suppliers, and customers whenever they need them, from wherever they are. On-site network attached storage solutions and application servers are costly and, often, inefficient options that must be continuously maintained and upgraded to ensure your data is always available and your applications are always operating at peak efficiency. A more cost-effective approach is to outsource your data storage and application server requirements.

Our IntelliServer service provides centralized hosting and co-location of IT infrastructure and application servers, backed by complete network administration, maintenance, and reporting that simplifies network, data, and application management.

With IntelliServer the daily hassles associated with using and managing advanced IT are eliminated so you can get on with your business.
